

The page indicator symbol within the recipe book GUI is untranslatable

MC-248844 Internationalisation

Status	Resolved / Fixed
Affected	1.18.1, 1.18.2 Release Candidate 1, 1.18.2, 1.19 Pre-release 1, 1.19, 1.19.1 (+6 more)
Fixed in	1.20.2 Pre-release 1
Reported	2022-02-28

STEPS TO REPRODUCE

1. Launch Minecraft Java Edition 1.18.1.
2. Create a new Creative world with default settings.
3. Open the inventory.
4. Open the recipe book GUI.
5. Navigate to a recipe book page where the page indicator is displayed.
6. Observe that the indicator shows the current and total page values separated by the ``/`` symbol.
7. Search for the page indicator string ``%s/%s`` in the official Minecraft Crowdin project.
8. Observe that the ``/`` symbol used in the recipe book page indicator has no translation key and is untranslatable.

OBSERVED BEHAVIOUR

When the recipe book contains more than one page, the page indicator is rendered using a hardcoded slash between the current page and total page count, for example ``1/3``. The ``/`` character is not associated with a translation key, so it cannot be translated or otherwise localized through the language files or the official Crowdin project.

EXPECTED BEHAVIOUR

The recipe book GUI's page indicator should use a translation key for the separator between the current and total page numbers, allowing the ``/`` symbol and surrounding page-count format to be translated consistently with other strings in the game. Players should be able to locate and provide a translation for this page indicator through the official localization project.

ENVIRONMENT

Minecraft Java Edition Versions: 1.18.1, 1.18.2 Release Candidate 1, 1.18.2, 1.19 Pre-release 1, 1.19, 1.19.1, 1.19.2, 22w43a, 22w45a, 1.19.3, 1.19.4, 1.20.1 (includes snapshots)

ORIGINAL DESCRIPTION

The Bug:

The ``/`` symbol that exists between the value of the current and total pages within the recipe book GUI is untranslatable and is missing a translation key.

This is a problem because every other string throughout the game that contains the ``/`` symbol is translatable, therefore introducing an inconsistency. Below, I've constructed a table to visually demonstrate how and why this is a valid internationalization issue and to show the inconsistency.

Translation Key

String

Context

Is the ``/`` symbol translatable?

item.minecraft.bundle.fullness

`%s/%s`

This string is used within bundle tooltips to show the fullness of a bundle.

Yes

filled_map.level

(Level %s/%s)

This string is used within filled map tooltips to show the level of a filled map.

Yes

item.durability

Durability: %s / %s

This string is used within item tooltips to show the durability of an item.

Yes

sleep.players_sleeping

%s/%s players sleeping

This string is displayed within the action bar to show how many players are currently sleeping.

Yes

N/A

%s/%s

This string is used within the recipe book GUI to show what page of the recipe book the player is on.

No

Steps to Reproduce:

- Attempt to search for the existence of this string by using this search filter on the official Minecraft crowdin project.
- Take note as to whether or not the page indicator symbol within the recipe book GUI is untranslatable.

Observed Behavior:

The page indicator symbol within the recipe book GUI is untranslatable.

Expected Behavior:

The page indicator symbol within the recipe book GUI would be translatable.

Code Analysis:

Code analysis by Avoma can be found below.

The following is based on a decompiled version of Minecraft 1.18.1 using MCP-Reborn.

net.minecraft.client.gui.screens.recipebook.RecipeBookPage.java

```
public class RecipeBookPage {  
    ...  
    public void render(PoseStack $ps, int $i0, int $i1, int $i2, int $i3, float $f) {  
        if (this.totalPages > 1) {  
            String s = this.currentPage + 1 + "/" + this.totalPages;  
            int i = this.minecraft.font.width(s);  
            this.minecraft.font.draw($ps, s, (float)($i0 - i / 2 + 73), (float)($i1 + 141), -1);  
        }  
        ...  
    }  
}
```

If we look at the above class, we
