

The symbols used within shulker box tooltips to show random loot table contents are untranslatable

MC-253638 Internationalisation

Status	Resolved / Fixed
Affected	1.19, 1.19.1 Release Candidate 1, 1.19.1 Pre-release 2, 1.19.1 Pre-release 5, 1.19.1 Release Candidate 2, 1.19.1 (+6 more)
Fixed in	1.20.2 Pre-release 1
Reported	2022-06-27

STEPS TO REPRODUCE

1. Launch Minecraft 1.19.1 Release Candidate 1.
2. Create and enter a Creative world with default settings.
3. Execute `/give @s minecraft:shulker_box{BlockEntityType:{LootTable:"minecraft:chests/simple_dungeon"}}`.
4. Move the pointer over the shulker box in the inventory to display its tooltip.
5. Search the official Minecraft Crowdin project for `???????`.
6. Observe that no translation key exists for the `???????` symbols.
7. Observe that the shulker box tooltip displays `???????` as untranslatable text.

OBSERVED BEHAVIOUR

When a shulker box item contains a `LootTable` block entity tag, its tooltip displays the literal text `???????` to indicate that the box contains randomly generated loot. This text is hardcoded as a literal component rather than being created from a translation key, so it remains unchanged in every language and cannot be translated through the Minecraft language files or the official Crowdin project.

EXPECTED BEHAVIOUR

The `???????` symbols displayed in a shulker box tooltip for a random loot table should have a translation key and be translatable through the official localization system. Translators should be able to provide a localized equivalent of this text, consistent with other in-game strings containing question-mark symbols, so the tooltip does not remain fixed and untranslated in every language.

ENVIRONMENT

Minecraft Java Edition Versions: 1.19, 1.19.1 Release Candidate 1, 1.19.1 Pre-release 2, 1.19.1 Pre-release 5, 1.19.1 Release Candidate 2, 1.19.1, 1.19.2, 22w43a, 22w45a, 1.19.3, 1.19.4, 1.20.1 (includes snapshots)

ORIGINAL DESCRIPTION

The Bug:

The `???????` symbols that are used within shulker box tooltips to show random loot table contents are missing a translation key. Every other string throughout the game that contains the `"?"` symbol allows it to be correctly translatable, therefore introducing an inconsistency.

If you wish to display this string of text in-game, you can run the following command provided below and observe the tooltip of the shulker box.

```
/give @s minecraft:shulker_box{BlockEntityType:{LootTable:"minecraft:chests/simple_dungeon"}}
```

Steps to Reproduce:

- Attempt to search for the existence of this string by using this search filter on the official Minecraft crowdin project.
- Take note as to whether or not the symbols used within shulker box tooltips to show random loot table contents are untranslatable.

Observed Behavior:

The symbols used within shulker box tooltips to show random loot table contents are untranslatable.

Expected Behavior:

The symbols used within shulker box tooltips to show random loot table contents would be translatable.

Code Analysis:

Code analysis by Avoma can be found below.

The following is based on a decompiled version of Minecraft 1.19.1 Release Candidate 1 using Mojang mappings.

net.minecraft.world.level.block.ShulkerBoxBlock.java

```
public class ShulkerBoxBlock extends BaseEntityBlock {  
    ...  
    @Override  
    public void appendHoverText(ItemStack itemStack, @Nullable BlockGetter blockGetter, List<Component> list,  
        TooltipFlag tooltipFlag) {  
        super.appendHoverText(itemStack, blockGetter, list, tooltipFlag);  
        CompoundTag compoundTag = BlockItem.getBlockEntityData(itemStack);  
        if (compoundTag != null) {  
            if (compoundTag.contains("LootTable", 8)) {  
                list.add(Component.literal("???????"));  
            }  
        }  
        ...  
    }  
}
```

If we look at the above class, we can see that the symbols used within shulker box tooltips to show random loot table contents are hardcoded, and as a result, are untranslatable. This is evident through the following line of code:

```
list.add(Component.literal("???????"));
```

MANUAL RESULT

Version used
