

Font file of some Korean completed font area is wrong

MC-254506 Internationalisation

Status	Resolved / Fixed
Affected	1.19, 1.19.1 Release Candidate 2, 1.19.2, 1.19.3
Fixed in	23w17a
Reported	2022-07-23

STEPS TO REPRODUCE

1. Launch Minecraft 1.12.2.
2. Create a new Creative world with default settings.
3. Open the in-game chat.
4. Enter the Korean characters `ㅁㅁ`.
5. Enter representative characters from the affected Unicode pages, including the sequences listed for `unicode\_page\_b2.png`, `unicode\_page\_b4.png`, `unicode\_page\_b6.png`, `unicode\_page\_b7.png`, `unicode\_page\_bb.png`, `unicode\_page\_bd.png`, `unicode\_page\_c0.png`, `unicode\_page\_c2.png`, `unicode\_page\_c4.png`, and `unicode\_page\_c7.png`.
6. Observe that `ㅁㅁ` and `ㅁㅁ` are rendered with identical or incorrect font glyphs, and that the affected Korean characters do not match the expected sequences.

OBSERVED BEHAVIOUR

The Korean glyphs in the Unicode font textures are incorrectly arranged or duplicated. As a result, some Hangul syllables render using the glyph for a different syllable; for example, `ㅁㅁ` and `ㅁㅁ` appear identical instead of using distinct glyphs.

In Minecraft Java Edition 1.12.2, the issue can be observed in the following font texture files:

- `unicode\_page\_b2.png`
- `unicode\_page\_b4.png`
- `unicode\_page\_b6.png` and `unicode\_page\_b7.png`
- `unicode\_page\_bb.png`
- `unicode\_page\_bd.png`
- `unicode\_page\_c0.png`
- `unicode\_page\_c2.png`
- `unicode\_page\_c4.png`
- `unicode\_page\_c7.png`

The same pattern also affects `unicode\_page\_c9.png`, `unicode\_page\_cb.png`, `unicode\_page\_cd.png`, `unicode\_page\_ce.png`, and `unicode\_page\_d4.png`. These files contain incorrect glyph mappings in portions of the Korean Hangul syllable ranges, causing multiple characters to display as the wrong glyph or as duplicates of another character.

EXPECTED BEHAVIOUR

In Minecraft Java Edition 1.12.2, Korean characters in the affected completed-syllable ranges should render as their correct, distinct glyphs, with each Unicode code point displaying the corresponding syllable. Characters such as ㅁㅁ and ㅁㅁ must not share an identical appearance, and the affected Unicode pages should follow the proper Korean syllable sequence without substituted, duplicated, or misplaced glyphs.

ENVIRONMENT

Minecraft Java Edition Versions: 1.19, 1.19.1 Release Candidate 2, 1.19.2, 1.19.3

ORIGINAL DESCRIPTION

<https://youtu.be/tHu7Ht6NJac> :: One korean youtuber says the font of ㅁㅁ[wi:l] and ㅁㅁ[weol] is identical

MC-34573

, but some are not fixed then.

Note: the affected version could not be fixed to 1.12+, but could include the entire ones since unicode font is introduced.
