

Vault/Ominous Vault loot isn't predetermined, allowing players to create backups of their worlds to get desired rewards

MC-270584 Loot tables

Status	Resolved / Fixed
Affected	1.20.4, 1.20.5 Pre-Release 1, 1.20.5 Pre-Release 3, 1.20.5, 1.20.6, 24w20a (+4 more)
Fixed in	24w19a
Reported	2024-04-10

STEPS TO REPRODUCE

1. Enter a singleplayer world and find a trial chamber.
2. Locate a vault in the trial chamber.
3. Press F3+C to copy the vault's coordinates.
4. Use the Esc menu -> Save and Quit to Title.
5. In Singleplayer, select the world and choose Edit -> Open World Folder.
6. Make a copy of the world folder.
7. Open one copy of the world and travel to the copied coordinates.
8. Open the vault at those coordinates.
9. Open the other copy of the world, travel to the same coordinates, and open the same vault.
10. Observe that the two copies provide different sets of rewards from the vault.

OBSERVED BEHAVIOUR

Actual behavior

The vault's loot is generated when it is opened rather than being fixed in the world beforehand. If the world is copied before opening the vault, opening the same vault at the same coordinates in each copy can produce different rewards, even when both copies have identical pre-opening world states. This also applies to ominous vaults; for example, repeatedly restoring a pre-opening backup can be used to reroll the rewards until a heavy core or another desired item is obtained. This primarily affects single-player worlds, where players can freely create and restore world copies.

EXPECTED BEHAVIOUR

When the same vault or ominous vault is opened in separate copies of the same world, it should generate the identical set of rewards each time. The vault's loot should be predetermined for that vault, so restoring or duplicating the world should not allow players to reroll the rewards and repeatedly open copies until obtaining a desired item such as a heavy core.

ENVIRONMENT

Minecraft Java Edition Versions: 1.20.4, 1.20.5 Pre-Release 1, 1.20.5 Pre-Release 3, 1.20.5, 1.20.6, 24w20a, 24w21b, 1.21 Pre-Release 1, 1.21, 1.21 Release Candidate 1 (includes snapshots)

ORIGINAL DESCRIPTION

This only realistically affects singleplayer. When you open a vault, you get a different set of rewards each time if you've created multiple copies of a world. This means for example, if you see a heavy core in an ominous vault, it's theoretically a guaranteed chance to get it simply by making copies of your world before opening the vault, repeating the process until you eventually get it.

Steps to reproduce:

1. Find a trial chamber and locate a vault.
2. Press F3+C to copy your coordinates.
3. Exit and make a copy of that world.
4. Open that vault in one of the copies of the world.

5. Open that same vault in the other copy of your world.

Observed results: I got a different set of rewards each time.

Expected results: I should get the same set of rewards each time.
