

Intersection chests in trial chambers not generating correctly

MC-273812 Loot tables

Status	Resolved / Fixed
Affected	1.21, 24w33a, 24w34a, 24w37a
Fixed in	1.21.2 Release Candidate 1
Reported	2024-06-24

STEPS TO REPRODUCE

1. Launch Minecraft and create a Creative world.
2. Enter the world and run `/place template minecraft:trial_chambers/corridor/end_1``.
3. Locate the trial chambers structure generated by the command.
4. Open the chest below the stairs.
5. Observe that the chest contains an iron block, a diamond, and a cake instead of loot generated from the intended loot table.

OBSERVED BEHAVIOUR

Actual behavior

The chest beneath the stairs in `minecraft:trial_chambers/corridor/end_1`` is generated with the same fixed contents every time: an Iron Block, a Diamond, and a Cake. It does not use the intended Trial Chamber intersection chest loot table when generated as part of the structure.

The corresponding loot table produces the expected loot when tested with `/loot``, indicating that the issue affects loot-table application during structure generation rather than the loot table itself.

EXPECTED BEHAVIOUR

The chest below the stairs in the trial chamber's corridor intersection should generate loot from the intended intersection chest loot table, rather than always containing only an iron block, a diamond, and a cake. Its contents should be generated correctly when the structure is placed, matching the results produced by the corresponding `/loot`` command.

ENVIRONMENT

Minecraft Java Edition Versions: 1.21, 24w33a, 24w34a, 24w37a (includes snapshots)

ORIGINAL DESCRIPTION

Moderator Note by zTxrbq

If you are coming from Mogswamp, please refrain from commenting here and asking Mojang to fix this. Comments are meant to provide new information, not as a petition forum for content creators. Comments like "please fix this" are spam; all comments containing feedback, complaints, change requests, no new info, and the like will be removed. Repeated violations may result in consequences to your bug tracker account.

Intersection loot chests in trial chambers only spawn with iron blocks, diamond, and cake instead of from the intended loot table. When running the `/loot` command it generates correctly, but not in the structures (see attached images).

Steps to Reproduce:

- Generate the "corridor/end_1" trial chambers structure by using the command provided below.

`/place template minecraft:trial_chambers/corridor/end_1`

- Open the chest below the stairs and observe how an iron block, a cake, and a diamond always generates.
