

Cape is jittering; movement way sharper than in snapshot 18w03b

MC-127749 Player Animation

Status	Resolved / Fixed
Affected	Minecraft 18w11a, Minecraft 1.13, Minecraft 18w30a, Minecraft 18w30b, Minecraft 18w31a, Minecraft 18w32a (+74 more)
Fixed in	23w05a
Reported	2018-03-30

STEPS TO REPRODUCE

1. Launch Minecraft snapshot 18w05a.
2. Join any Minecraft world.
3. Toggle perspective mode so that your cape is visible.
4. Start walking while sprinting.
5. Press and hold W+A or W+D to move diagonally.
6. Move the mouse in the direction you are walking so that it looks like you are walking in circles.
7. Observe the cape animation jittering and behaving unusually.

OBSERVED BEHAVIOUR

In snapshot **18w05a**, the equipped cape does not move smoothly when the player sprints diagonally using **W+A** or **W+D** while turning with the mouse. During circular movement, the cape visibly jitters and changes direction abruptly, producing much sharper motion than in **18w03b**. The issue affects the cape's visual animation; player movement itself remains functional.

EXPECTED BEHAVIOUR

When the player moves in circles while sprinting with a cape visible, the cape should follow their movement with smooth, natural animation. Its motion should remain stable and fluid during directional changes, without jittering or appearing unusually sharp. Cape behavior should match the smooth movement seen before snapshot 18w05a, including the behavior observed in snapshot 18w03b.

ENVIRONMENT

ORIGINAL DESCRIPTION

Steps To Reproduce:

- Join any Minecraft world
- Toggle perspective mode, so you can see your cape
- Now start walking with sprint and press W+A or W+D
- Move your mouse in the direction you're walking (it should look like you're walking in circles)
- Observe how weirdly the cape behaves

Expected Result: Smooth cape movement animation, just as it was before snapshot 18w05a

Actual Result: Cape animation is jittering

Video demonstrating the issue: YouTube Video

Additional Information:

After a few checks, I found that the first time when the bug appeared in a game was in a snapshot 18w05a, but before that version, there was a snapshot 18w03b where everything was fine with a cape.
