

Items placed by a copper golem in a double chest do not update redstone comparators reading the right side of the double chest

MC-300088 Redstone

Status	Resolved / Fixed
Affected	25w31a, 25w35a
Fixed in	25w36a
Reported	2025-07-29

STEPS TO REPRODUCE

1. Place a copper chest.
2. Place a double chest with a redstone comparator on its right side.
3. Place 3 stacks and 54 items in the double chest.
4. Place 1 item of the same type in the copper chest.
5. Spawn a Copper Golem.
6. Wait until the Copper Golem moves the item from the copper chest to the double chest.
7. Observe that the redstone comparator outputs a power level of 1 instead of the expected power level of 2.

OBSERVED BEHAVIOUR

Actual behavior

When the Copper Golem transfers the item from the Copper Chest into the Double Chest, the Redstone Comparator attached to the right side of the Double Chest does not update its output. It remains at a power level of ****1****, even though the Double Chest now contains the additional item and should produce a power level of ****2****.

EXPECTED BEHAVIOUR

After the Copper Golem moves the item from the Copper Chest into the double chest, the redstone comparator reading the right side should detect the updated inventory contents and output a power level of 2. The comparator should update consistently when the golem adds the item, rather than remaining at power level 1.

ENVIRONMENT

Minecraft Java Edition Versions: 25w31a, 25w35a (includes snapshots)

ORIGINAL DESCRIPTION

- Steps to reproduce the issue

Place a copper chest and a double chest, with a comparator on the right side of the double chest

- Place 3 stacks and 54 items in the double chest

- Place 1 of the same item in the copper chest

- Spawn a Copper Golem and wait for it to move the item from the Copper Chest to the Double Chest

- Expected result

Redstone Comparator outputs a power level of 2

- Actual result

Redstone Comparator outputs a power level of 1
