

The back faces of spawners do not render

MC-169969 Rendering

Status	Resolved / Fixed
Affected	1.15.1, 1.15.2 Pre-release 2, 1.15.2, 20w18a, 1.16 Pre-release 1, 1.16 Pre-release 3 (+38 more)
Fixed in	23w45a
Reported	2020-01-16

STEPS TO REPRODUCE

1. Create and enter a Creative world.
2. Open the chat and enter `/give @s minecraft:spawner``.
3. Place the spawner as a single, isolated block.
4. View the spawner from one direction and observe that only one to three faces are visible.
5. Move around to the other side of the spawner.
6. Observe that faces are visible from the other side, despite appearing to be absent from the original view.

OBSERVED BEHAVIOUR

Actual behavior

In Java Edition, the vanilla spawner block model does not include the inward-facing surfaces of the cage bars. As a result, the bars are rendered only when viewed from the side containing their outward-facing geometry. When looking through the cage from the opposite direction, the corresponding back faces are absent and the background can be seen through them.

Consequently, an isolated spawner may appear to have only one to three visible sides, depending on the camera direction. Moving around the block reveals that the cage geometry exists on the opposite sides, but those sides were not rendered from the original viewpoint.

EXPECTED BEHAVIOUR

When viewed from any direction, a placed spawner should render all of its faces, including the back faces and their spawner bars. Walking around the block should not reveal missing geometry or make it appear to have only one to three faces; the spawner should maintain a complete, consistent appearance from every viewpoint.

ENVIRONMENT

Minecraft Java Edition Versions: 1.15.1, 1.15.2 Pre-release 2, 1.15.2, 20w18a, 1.16 Pre-release 1, 1.16 Pre-release 3, 1.16.3, 20w51a, 1.16.5, 21w06a, 21w07a, 21w08b, 21w13a, 21w14a, 21w15a, 21w16a, 21w17a, 21w19a, 21w20a, 1.17 Pre-release 1, 1.17 Pre-release 3, 1.17 Pre-release 4, 1.17 Pre-release 5, 1.17 Release Candidate 1, 1.17 Release Candidate 2, 1.17, 1.17.1 Pre-release 1, 1.17.1 Pre-release 2, 1.17.1 Pre-release 3, 1.17.1 Release Candidate 1, 1.17.1, 21w38a, 21w40a, 21w42a, 21w43a, 21w44a, 1.18, 1.18.1, 1.18.2, 22w14a, 1.19, 1.19.2, 22w45a, 1.20.2 (includes snapshots)

ORIGINAL DESCRIPTION

The resource pack attached to

MC-237955

Open

offers a complete fix for this issue. Mojang have my full permission to (and are encouraged to) replace the affected vanilla model files with the contents of the resource pack.

The bug

The back faces of spawner blocks do not render. This results in spawners looking rather odd, as only the faces closest to the player are visible, making it look like the block only has one to three faces total.

This can be considered a parity issue, as spawners in Bedrock Edition are not subject to this.

How to reproduce

- Obtain a spawner via commands (the Creative inventory will not work for this, see

MC-132820

Resolved

):

/give @s minecraft:spawner

- Place down a single, isolated spawner block

- Observe how many faces are visible. Depending on the view direction, between one and three faces are able to be seen.

- Now go around to the other side of the spawner block

- Note how there are indeed faces there as well, despite the original view direction implying there are no faces with spawner bars.

Expected result

These back faces of the spawner would be visible from all faces.

Actual result

The spawner block just doesn't show the back faces, which looks very strange.

How to fix

The resource pack attached to

MC-237955

Open

fixes this issue completely. A new "hollow cube" template model is created by it, based on the old powder snow model. Powder snow, spawners and both types of azalea leaves (

MC-171859

Resolved

) are all pointed to this model, resulting in them having internal faces and fixing this issue.
