

Local game hosting messages aren't prefixed with gray color indicators

MC-254419 Social Interactions

Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-21

STEPS TO REPRODUCE

1. Launch Minecraft 1.19.1 Pre-release 4.
2. Create or join a singleplayer Creative world with default settings.
3. Execute the command `/tag @s add test`.
4. Observe that the command feedback message in chat has a gray color indicator.
5. Open the Esc menu and select Open to LAN, then select Start LAN World.
6. Observe that the local game hosting message in chat is not prefixed with a gray color indicator.

OBSERVED BEHAVIOUR

When ****Open to LAN > Start LAN World**** is used in a singleplayer world, the resulting local game hosting notification is displayed in chat without the gray color indicator used for system messages. By comparison, the feedback from `/tag @s add test` is correctly displayed with the gray indicator. This occurs when the world is opened to LAN through the pause menu rather than by executing `/publish`.

EXPECTED BEHAVIOUR

When a singleplayer world is opened to LAN, the resulting local game hosting messages should be displayed as system messages with the same gray color indicators used for command feedback. Every applicable hosting notification should consistently include the gray prefix, including messages shown when starting LAN hosting without using the `/publish` command.

ENVIRONMENT

Minecraft Java Edition Version 1.19.1 Pre-release 6

ORIGINAL DESCRIPTION

The Bug:

Local game hosting messages aren't prefixed with gray color indicators despite being system messages.

The 1.19.1 Pre-release 4 changelog states that

System message are now displayed with a gray color indicator

This means that any messages that are displayed by the system, for example, command feedback messages, are prefixed with gray color indicators. Despite messages displayed through opening a world to LAN (when not using the `/publish` command) being considered system messages, they are not prefixed with gray color indicators.

Steps to Reproduce:

- Join a singleplayer world and display a system message in chat by adding a tag to yourself by executing the following command.

-

`/tag @s add test`

- Take note of how the command feedback message is correctly prefixed with a gray color indicator as it's a system message.

- Open your world to LAN by pressing ESC > Open to LAN > Start LAN World and look at the message displayed in chat.

- Take note as to whether or not local game hosting messages are prefixed with gray color indicators.

Observed Behavior:

Local game hosting messages aren't prefixed with gray color indicators despite being system messages.

Expected Behavior:

Local game hosting messages would be prefixed with gray color indicators.
