

Social interaction messages aren't prefixed with gray color indicators

MC-254421 Social Interactions

Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-21

STEPS TO REPRODUCE

1. Launch Minecraft 1.19.1 Pre-release 4.
2. Join a multiplayer environment with other players.
3. Execute the command `/tag @s add test``.
4. Take note that the command feedback message is prefixed with a gray color indicator.
5. Open the social interactions menu.
6. Select any player.
7. Click the "Hide/Show messages" button beside the selected player's name.
8. Observe the social interaction message in chat and note that it is not prefixed with a gray color indicator.

OBSERVED BEHAVIOUR

When the **Hide messages** or **Show messages** button is used for a player in the Social Interactions menu, the resulting notification appears in chat without the gray color indicator used for system messages. This differs from command feedback, such as the response to `/tag @s add test``, which is correctly displayed with a gray indicator.

EXPECTED BEHAVIOUR

Social interaction messages should be displayed with the same gray color indicator used for other system messages, such as command feedback. When a player hides or shows another player's messages through the Social Interactions menu, the resulting chat notification should be clearly identified as a system message by including the gray indicator.

ENVIRONMENT

Minecraft Java Edition Version 1.19.1 Pre-release 6

ORIGINAL DESCRIPTION

The Bug:

Social interaction messages aren't prefixed with gray color indicators despite being system messages.

The 1.19.1 Pre-release 4 changelog states that

System message are now displayed with a gray color indicator

This means that any messages that are displayed by the system, for example, command feedback messages, are prefixed with gray color indicators. Despite messages displayed from using the social interaction system being considered system messages, they are not prefixed with gray color indicators.

Steps to Reproduce:

- Join a multiplayer environment with other players on it and display a system message in chat by adding a tag to yourself by executing the following command.

-

`/tag @s add test`

- Take note of how the command feedback message is correctly prefixed with a gray color indicator as it's a system message.

- Open up the social interactions menu, select any player and click the "Hide/Show messages" button beside their name.

- Look at the message that's displayed in chat.
- Take note as to whether or not social interaction messages are prefixed with gray color indicators.

Observed Behavior:

Social interaction messages aren't prefixed with gray color indicators despite being system messages.

Expected Behavior:

Social interaction messages would be prefixed with gray color indicators.
