

The exit portal in the end generates at highest block at 0 0 which can make it generate incomplete

MC-93185 Structures

Status	Resolved / Fixed
Affected	Minecraft 15w47c, Minecraft 17w06a, Minecraft 1.13.1, Minecraft 1.13.2, Minecraft 19w05a, Minecraft 19w06a (+21 more)
Fixed in	25w02a
Reported	2015-11-22

STEPS TO REPRODUCE

1. Download `MC-93185.zip`.
2. Place `MC-93185.zip` in the game's `saves` folder.
3. Launch Minecraft in version 1.9 or newer with the new dragon fight.
4. Open Options -> Video Settings and set Render Distance to 11 or higher.
5. Open the world from the Singleplayer menu.
6. Observe that the exit portal generates at the highest block at coordinates 0, 0 and may be incomplete, with end crystals from old end pillars potentially inside it.

OBSERVED BEHAVIOUR

Actual behavior

When a pre-1.9 world is opened in Minecraft 1.9 or later and the Ender Dragon fight is initialized, the End exit portal is generated on top of the highest block at ****X=0, Z=0**** rather than at the intended central-island location.

If the highest block at those coordinates is uneven or otherwise obstructs the portal structure, some of the portal's bedrock blocks are not generated, leaving the exit portal incomplete and unusable. In some worlds, end crystals left over from the old End pillars are also present inside the generated portal structure.

EXPECTED BEHAVIOUR

The End exit portal should generate at the intended location and elevation at the center of the island, with its complete bedrock structure intact and usable. Opening a pre-1.9 world in a newer version should not place the portal on the highest block or leave it incomplete, and remnants such as old end crystals should not appear inside the portal.

ENVIRONMENT

Minecraft Java Edition Versions: 15w47c, 17w06a, 1.13.1, 1.13.2, 19w05a, 19w06a, 19w07a, 19w14a, 19w14b, 1.14.4, 1.15 Pre-release 1, 1.15.2, 20w19a, 20w21a, 1.16.3, 1.16.4 Release Candidate 1, 1.16.4, 20w46a, 1.17.1, 1.18.1, 1.20.1, 1.20.4, 23w51b, 1.20.6, 1.21 Pre-Release 2, 1.21, 24w35a (includes snapshots)

ORIGINAL DESCRIPTION

The bug

The exit portal in the end generates at the highest block at 0 0 after opening a pre 1.9 world in 1.9 or newer versions. This can cause the portal to be incomplete. Additionally you might end up with end crystals from old end pillars inside it.

How to reproduce

- Download MC-93185.zip and drag it into .minecraft\saves.

Set your Render Distance to 11 or above, due

MC-137467

Resolved

.

- Open the world in the latest version (with the new dragon fight).

→ The portal generated at the highest block at 0 0. With this example it generated incomplete, see End portal generating at highest block (17w06a).png.
