

Villager trading window is not closed when villager leaves interaction range

MC-50614 Trading

Status	Resolved / Fixed
Affected	Minecraft 14w10c, Minecraft 14w19a, Minecraft 14w21b, Minecraft 14w28b, Minecraft 14w29b, Minecraft 14w30c (+41 more)
Fixed in	24w44a
Reported	2014-03-08

STEPS TO REPRODUCE

1. Launch Minecraft and create a Creative world with default settings.
2. Spawn a villager and a zombie.
3. Start trading with the villager.
4. Wait until the villager moves outside the interaction range.
5. Observe that the trading window remains open.

OBSERVED BEHAVIOUR

Actual behavior

After the player opens a trading interface with a villager, the interface remains open when the villager is moved outside the player's interaction range. The trading window does not close automatically when the villager leaves that range, even though the player can no longer directly interact with the villager.

EXPECTED BEHAVIOUR

When the villager moves outside the player's interaction range, the trading window should close automatically and immediately. The player should no longer be able to view or use that villager's trading interface while the villager is out of range. The window should remain open only while the villager is within the valid interaction range.
