

The game output and server console are logged and spammed with "Creating a MIN function between two non-overlapping inputs" when joining or creating a world

MC-248636 World generation

Status	Resolved / Fixed
Affected	22w07a, 1.18.2 Pre-release 1, 1.18.2 Pre-release 2
Fixed in	1.18.2 Pre-release 3
Reported	2022-02-16

STEPS TO REPRODUCE

1. Launch a server running Minecraft 22w07a with logging enabled.
2. Wait until the server finishes booting.
3. Create a world or join an existing world.
4. Monitor the game output log and server console as the world loads.
5. Observe that the logs are spammed with "Creating a MIN function between two non-overlapping inputs" warnings.

OBSERVED BEHAVIOUR

In Minecraft 22w07a, creating a new world or joining an existing world causes the game output and server console to repeatedly emit warning messages stating:

```
```text
```

```
Creating a MIN function between two non-overlapping inputs
```

```
```
```

The warnings are generated during world initialization or player connection while terrain/noise-generation functions are being constructed. Each warning includes a large serialized description of the affected world-generation function, resulting in substantial log spam in both the client game output and the dedicated server console.

The warnings were not observed in Minecraft 1.18.1 or snapshot 22w06a. No additional gameplay failure is reported, but the unexpected repeated warnings make the logs difficult to use and indicate a regression in world-generation initialization.

EXPECTED BEHAVIOUR

When joining an existing world or creating a new world, the game should load normally without repeatedly logging or spamming the warning "Creating a MIN function between two non-overlapping inputs." The game output and server console should remain free of these warnings while world loading and gameplay continue as expected.

ENVIRONMENT

Minecraft Java Edition Versions: 22w07a, 1.18.2 Pre-release 1, 1.18.2 Pre-release 2 (includes snapshots)

ORIGINAL DESCRIPTION

The Bug:

The game output and server console are logged and spammed with "Creating a MIN function between two non-overlapping inputs" when joining or creating a world.

This issue was not present in 1.18.1 or 22w06a.

The following messages were printed into the server log shortly after booting up a server running 22w07a.

```
[18:30:43 WARN]: Creating a MIN function between two non-overlapping inputs: h[type=SQUEEZE, input=j[type=MUL, input=i[type=Interpolated, function=c[input=u[settings=ctz[minY=0, height=128, noiseSamplingSettings=cty@26e25469, topSlideSettings=cua[target=0.9375, size=3, offset=0], bottomSlideSettings=cua[target=2.5, size=4, offset=-1], noiseSizeHorizontal=1, noiseSizeVertical=2, islandNoiseOverride=false, isAmplified=false, largeBiomes=false, terrainShaper=cby@4426f128],
```

```
